

## 7 À chacun sa représentation

Associer chacune des situations **A**, **B**, **C** à sa représentation microscopique (**1**, **2** ou **3**).

**A** Eau salée saturée

**B** Eau salée

**C** Eau et craie

**1**

**2**

**3**

The diagram illustrates the association between macroscopic observations and microscopic models. Beaker A (saturated salt water) is linked to representation 1 (saturated solution of blue and red particles). Beaker B (unsaturated salt water) is linked to representation 2 (unsaturated solution of blue and red particles). Beaker C (water and clay) is linked to representation 3 (mixture of blue particles and green particles at the bottom). Red arrows indicate these pairings: A to 1, B to 2, and C to 3.
